Sustainable development, defined in 1987 by the UN Brundtland Report, aims to meet the needs of the present without compromising those of future generations. Corporate social responsibility (CSR) is the contribution made by companies to meeting these challenges.

This approach encourages companies to adopt better practices to improve society and protect the environment. The European Masters in Operational Management of Sustainable Development offers technical and operational skills for integrating these principles into companies.

LEARNING OUTCOMES

- Understand the challenges of sustainable development and how it relates to local and regional issues.
- Understand the concept of CSR and its implications
- Be familiar with and use CSR management tools and guidelines.
- Know the latest applicable laws
- Understand the issues and challenges associated with CSR in relation to running an organisation
- Understand ISO26000, its seven key questions and areas of action
- Promote a new CSR culture in the organisation and employee involvement
- Develop skills for cross-functional management
- Implement a Quality Safety Environment (QSE) policy
- Advise and assist management on the basis of a sustainable development diagnosis
- Master the steps involved in setting up a CSR management system
